Understanding our  
Packaging Terms

Packaging that's Built for Growth

# The Detpak Difference

## Innovation

We understand how important differentiation is across every aspect of your business.

That's why we have Launchpad™, our specialist, in-house packaging design agency and in-house R&D lab that drives innovation and growth exclusively for our customers; through bespoke design, material science, cost engineering and sustainability.

When you partner with Detpak, we help your brand stay differentiated in a busy market.

## Sustainability

Sustainable packaging is undoubtedly the future, but we understand the pathway to that future is inconsistent, uncertain and anything but clear.

That's where our sustainability experts come in, ensuring you have sustainable solutions fit for an evolving regulatory environment.

It means sustainable choices today and the peace of mind you'll be ready for whatever tomorrow brings.

## Supply Chain

The bigger your business gets, the bigger the disruption when something unexpected occurs.

That's why we've deliberately built a global production network with owned manufacturing in seven countries, supply contingency across every product category and a dedicated global sourcing team.

So, when you partner with Detpak, you can rest assured that packaging will never be your weakest link.

## Mitigating Rising Costs

We understand your margins are under pressure due to high costs across the entire supply network.

That's why our global supply chain and procurement teams proactively work to find raw materials and product specifications that suit your needs as well as keeping your costs down.

In a world of rising costs, we'll ensure your packaging spend is used as efficiently as possible.

# Packaging for a better tomorrow

For over 40 years, sustainability has been a cornerstone of Detpak. Our 2025-2050 Sustainability Goals demonstrate our commitment to making a positive impact for our people, partners, and planet. Encompassing 15 targets across the pillars of Climate, Nature, Circularity, and Governance, these goals actively demonstrate our commitment to being an innovative global partner, creating packaging for a better tomorrow.

## A world of lining options

As single-use plastics legislation continues to evolve, Detpak has eliminated linings on a range of products where not required for functionality. We have shifted entire categories to more renewable coating options, and now offer a range of options including Aqueous, PBS and PLA. Detpak continues to be a leader in new and emerging lining technologies and encourages a holistic approach to required linings and their end-of-life disposal.

## Designing for end-of-life

Our dedicated product designers undertake assessments against Sustainable Packaging Guidelines to ensure the materials used are designed for recovery where practical. We also prioritise recycled content wherever possible, with a large number of products containing more than 80% recycled materials. We also maintain the most highly recognised global standard for food safety and quality including ISO:9001 and BRCGS.

# Sustainable Choices

## Responsible sourcing

Detpak facilities globally are FSC™ and PEFC Chain of Custody certified, and we also offer FSC™ and PEFC certified products. This means products have documented traceability through the entire supply chain, from forest to end product. Our key suppliers are also audited, to provide confidence that all tree fibre materials are from responsibly managed sources, which contain no illegal, controversial or old-growth fibre.

## Community comes first

Detpak takes pride in being a responsible manufacturer and employer, not just an importer. As a family-owned company, Detpak chooses to positively impact and take care of our communities around the world, from our headquarters, to supporting initiatives in the countries where we operate, and beyond. We welcome the regular social accountability audits we are a part of for our global customers.

# We've got you covered

## Countries are now taking action against single-use problematic plastics (SUPPs).

At Detpak, we provide circular packaging solutions fit for evolving global regulatory environments.

We stay ahead of legislative changes and offer an extensive range of recyclable and compostable packaging solutions, ensuring sustainable alternatives for your location.

Visit [detspak.com](https://detspak.com) or contact our team to stay up to date with legislative changes and discover compliant product solutions for your region.

Scan to discover sustainable packaging solutions and make the switch to paper

**WE MAKE RESPONSIBLE CHOICES,  
TO MAKE YOUR CHOICE EASY**

## No added PFAS

We have now transitioned all affected products to new materials, including no added PFAS grease-resistant papers and the Vanguard® by Eco-Products® range of moulded fibre products. Our commitment to sustainability is evident in pioneering packaging solutions for a better tomorrow.

The full Detpak range is now free of added PFAS, giving you peace of mind when selecting your foodservice packaging range.

## What is PFAS?

PFAS (per- and poly-fluoroalkyl substances) are a group of chemicals used in a range of applications in common household items, to provide them with water, heat, sticking or grease resistance properties. PFAS are considered forever chemicals as they remain present in organisms and the environment indefinitely.

# Elevate Your Brand

At Detpak, our packaging experts are dedicated to turning packaging from a basic need into a strategic advantage for your business. Through our in-house R&D lab, Launchpad™, we deliver innovative packaging solutions tailored to your needs, partnering with Detpak means you receive quality and customised packaging solutions designed to fuel your growth.

Choose your item from our wide range and follow the simple steps below to customise. Minimum order quantities vary by product and size however as a guide:

Hot Cups	From 50,000 per size
Bags	From 5,000 per size
Wraps	From 25,000 per size
Cartons/Trays	From 10,000 per size
Bowls	From 50,000 per size
Napkins	From 25,000 per size

## Takeaway & Checkout Bags

Takeaway and Checkout Bags are constructed from strong materials for holding multiple items. They are free-standing and easy to load.

# Poly-Lined Food Trays

Food Trays are sturdy and can be used for a variety of different foods. These trays are poly-lined to provide extra grease resistance.

RECYCLABLE

# Eco-Products® Sugarcane Clams

Vanguard from Eco-Products® Sugarcane Clams are sturdy and ideal for use with hot, cold and greasy foods. The sugarcane retains temperature but is breathable, keeping foods hot and crispy. These clams are fridge, freezer and microwave safe, and ovenable for up to 220°C for 20 minutes. We recommend oven testing to ensure suitability for your own operating conditions.

# Understanding our Packaging Terms

## What is 'Recyclable'?

A product or material is recyclable if it can be collected and re-manufactured into a new product. If a Detpak product is listed as recyclable, it means this product can be readily recycled once food residue has been removed. Please check local guidelines before recycling as these may vary.

## What is 'Compostable'?

Compostable packaging is made from organic materials that break down naturally in optimal conditions, leaving no toxic residue. Microorganisms, humidity, and heat are required to break packaging down effectively and when combined with green waste and food scraps, can create nutrient dense compost to improve our soils.

Detpak's range of unlined paper and board products are readily compostable. All other items marked 'compostable', hold various global certifications, enabling consumers to understand how to responsibly dispose of their packaging. Certain packaging requires a commercial composting facility with the right amount of heat and moisture to break down, other items may breakdown in a home compost environment. We recommend checking with your local council regarding acceptance of food soiled compostable packaging through green waste collection.

### Commercial Compostability

AS 4736 – Australian Standard Certification  
EN 13432 – European Certification

The AS 4736 include the same certification standards as the EU 13432 but adds additional testing requirements for soil and worm toxicity. The AS 4736 Commercial Composting Standard undertakes the most stringent of testing and globally is held in high regard as the leading commercial composting standard.

### Home Compostability

AS 5810 – Australian Standard Certification  
Detpak utilises the Australian Home AS 5810 composting standards, as it undertakes the most stringent of testing and globally is held in high regard as the leading home composting standard.

## How we measure our products

Measurements throughout our Product Catalogue are displayed in millimeters.

### Bags & Wraps

L x W x G  
Length x width x gusset (where applicable)

### Bowls

L x W x H  
Diameter x diameter x height

### Cartons & Trays

L x W x H  
Length x width x height

## What is 'No Added PFAS'?

A product that has not had PFAS added. PFAS (per- and poly-fluoroalkyl substances) are a group of forever chemicals used to provide common products with water, heat, sticking, or grease resistance properties. The Detpak stock range is free of added PFAS.

## Our Materials

### Paper and wood

Our paper and board is sourced only from responsible forestry, meaning no old growth forests are used. We use quality papers and board when making all our products for premium quality assurance.

### Aqueous

Aqueous lining is an innovative water-based dispersion coating which significantly reduces synthetic polymer usage compared to bioplastic and plastic-lined options.

### PBS (Polybutylene Succinate)

Polybutylene Succinate is a polymer which is made from two different components. One component is fossil fuel based, and the other component can be derived from renewable plant sources. This material creates a compostable and recyclable solution for cartons, without compromising on quality or performance.

### PLA (Polylactic Acid)

Polylactic Acid is a bioplastic derived from cornstarch. It is a rapidly renewable resource and can be certified as industrially compostable. Our PLA options include CPLA (crystallised polylactic acid) or PLA-lined packaging.

### Cellulose

Cellulose film is derived from plant cells and performs well in high-temperature environments. Cellulose film is compostable and provides crystal-clear viewing.

### Sugarcane (Bagasse)

Sugarcane bagasse, a byproduct from sugarcane production, is an example of fibre-based packaging and is a rapidly renewable resource. Our sugarcane can be certified as either home or industrially compostable.

### Plastic

Our traditional plastic options include cups, lids and bowls and are made from PET, polystyrene or polypropylene. These items are marked on the product with a Plastics Identification Code (PICs) between 1 and 7, which denotes the type of plastic used to make the product.

## Weight Ratings

Detpak Carry and Checkout Bag weight ratings are provided as a guide only. Weight ratings are issued for general use in retail, takeaway and grocery environments. Additionally, it is recommended to test Detpak bags with your own product to ensure it is fit-for-purpose.
